PRESENTATION FROM CLASS

powerpoint from class (PDF)

MAIN COURSE (REQUIRED)

NOTE: The topic this week is "Learning Styles". When reading a research study, sometimes the more important piece is the literature review giving you a feel of what's been done with respect to learning styles. This applies to the main course and optional readings

SIDE ORDER #1 (OPTIONAL) - More on learning styles

NOTE: The main course readings cite a number of articles connecting learning styles to learning, teaching, success, etc. It would be perfectly acceptable (and encouraged) to find one of these readings of particular interest to you and do that instead of one of these two (or find a completely different but related article).

Week 13 - Styles and Beliefs

Written by Matthew J Koehler
Friday, 27 March 2009 15:17 - Last Updated Thursday, 02 July 2009 20:33

Journal of Computing in Higher Education, 16
1, 30-47.

Take an online learning style inventory

SIDE ORDER #2 (OPTIONAL) - Epistemological Beliefs

NOTE: A similar, yet different, topic to learning styles is epistemological beliefs which are those beliefs about "the nature of knowledge." If this topic interests you, perhaps side order #2 is for you. The first reading is kind of long, perhaps scanning the article to get a sense of the many different approaches to epistemological beliefs would be best. Maybe pick the approach that you like best and read that section deeper. The other two are studies connecting beliefs to learning. Getting a sense of the literature review is perhaps more important than the methodology here (unless that really interests you).

WRITING ASSIGNMENT

This week you will write about your learning style and how that might impact how you learn.
